### Abstract

An efficient and easy method for one-pot three-component synthesis of 1,3-disubstituted-3*H*-benzo[*f*]chromenes by the condensation of naphthol, aromatic aldehyde derivatives and phenylacetylene in the presence of ferric hydrogensulfate [Fe(HSO<sub>4</sub>)<sub>3</sub>], has been described. The catalyst displayed high activity which afforded the corresponding 1,3-disubstituted-3*H*-benzo[*f*]chromenes in satisfying yields. Alkyl-substituted phenols were examined and the corresponding benzopyran derivatives were synthesized in moderate yields. Heterogeneous nature of the using catalyst made it reusable for further chemical reactions.
